about

I'm a Pythonic developer that enjoys using *and* creating software that can be called objectively good (or as close to it as possible). I believe good practices and attention to detail are very important in general and especially crucial in IT. I like tasks that are out of my comfort zone and the knowledge that comes with them. I think humility and open-mindedness are two of the most important qualities a person can have. My antiheroes are Bender Rodríguez and David Brent.

experience

08.18 – Now   **Twenty3 Sport / All Sports Whispers**   Remote / London, UK

Originally hired to help the data science team productise their code by converting PoC into MVPs, deploy them to AWS and implement best coding practices (i.e. CI / CD, Sentry, Docker based environments). I then worked on rewriting our football data digestion pipeline that imports and post-processes thousands of events each day (from multiple data providers) and exposes it via Django REST Framework based API. Created in 2019, it's still actively developed and empowers tools used by customers like SkySports, Squawka, LiveScore and William Hill.

09.17 – 07.18   **VM Farms**   Toronto, Canada

Part of a platform engineering team that maintained a custom build deployment pipeline, a client facing portal and an all purpose internal CLI. We worked directly with our in-house operations team to provide them with the tools to efficiently provision, configure and continuously support our client's servers.

10.16 – 08.17   **Omni Digital**   Bristol, UK

Important member of an agile Python development team working on various projects - both internal and public facing - for clients like NHS, UK Chamber of Shipping and SWNS. I was also involved in implementing a company wide Ansible stack used for all our deployments.

09.15 – 09.16   **Sidnet Solutions / Pythonity**   Remote / Warsaw, Poland

A one-man Python development team responsible for creating and maintaining Schedoodle, our internal tool that helped track availability of all employees, an official Polish site for Kolbe personality tests, and a canola trading platform made for one of the biggest Polish oil distributors. I was also tasked with releasing and maintaining some of our projects on GitHub.

04.15 – 09.15   **JMR Technologies**   Warsaw, Poland

Helped develop and release two of the company's biggest Python projects - a fully multilingual and customisable product knowledge base, and a parcel tracking status aggregator. I was also responsible for managing our production server and creating most of our provisioning automation scripts.

education

2013 – 2016   **Warsaw University of Technology**   University

2010 – 2013   **I Liceum Ogólnokształcące w Zielonej Górze**   High School

open source

- pymonzo - Modern Python API client for Monzo public API.
- monz - Simple CLI for your Monzo account.
- fakester - Rickroll your boss while preserving the element of surprise.
- Contributions to open source projects: pytest, tox, celery, errbot, mattermost, django-polymorphic, django-organizations django-reversion, django-kronos
